

# Realistic Concept

Monday, July 29, 2024

11:00 PM

- What can realistically be done before school?
  - I can make a very simple data base of hand picked movies.
  - I can make certain rooms (fake rooms)
- What programming language will be used.
  - Since this is not a real app, I'm going to use C programming for practice.
  - Perhaps one day I can try to use HTML if I have time.
- Final thoughts/(self reminder)
  - For now this app will be very very very basic.
  - The main focus for now is to just hold a database of select movies in a simple C programming GUI.
  - Once the movies are in the database I will add certain rooms that are fake and bare bone.
  - This is just a simulation of what the app would look like if it were to be online but very bare bone.
  - Overall, just get it to run!!!!
